CASE STUDY NAME

FILTRATION OF AN AUTOMATIC CNC DEBURRING MACHINE

Case Study Facts

Products:	GF-8000 Filter Unit	Process:	Automatic grinding

Customer: ETİ MAKİNA - Turkey

Requirements & Challenges

ETİ Makina belongs to one of the Turkey's leading producer in the biscuits, chocolate, cake and chilled snacks production. ETİ Makina delivers production lines regarding all these bakery/biscuit/chocolate machine manufacturing technology.

A CNC controlled **deburring & finishing working center from COSTA** (Italy) has put in operation in ETİ Makina, at its Eskişehir Plant. There was a need for a **robust filter unit**, to collect the tiny dust and smoke particles which were generated at COSTA deburring work-center. It was absolutely necessary for ETİ Makina to provide a **healthy and safe work** environment and get rid of the dust.

SOLUTION

After investigating the metal parts to be grinded, VANTERM installed GF-8000 filter unit, in order to collect the dust generated at COSTA deburring & finishing work-center. With its **integrated spark separator** and **integrated automatic fire alarm & extinguishing system** VANTERM GF-8000 filter unit has met all the demands and challenges at site.
