CASE STUDY NAME

LASER CUTTING FUME EXTRACTION WITH PL-FILTER UNITS

Case Study Facts

Products:	PL - Filter Units	Process:	CNC Laser Cutting Brand: KOIKE LASER

Customer: SEWTSERVICE AB - Norway

Requirements & Challenges

The CNC controlled KOIKE Laser cutters were equipped with fiber laser technology and it was necessary to meet the high dust load with an effective extraction and filtration solution. There were total 2 pcs. of laser cutters from KOIKE with different size and capacities. The laser cutting machines were installed in different halls in the production arae. The thick material that are cut very often on each laser cutter, was creating a big smoke and dust problem in the production area and for the operators.

SOLUTION

VANTERM with its many years' experience in the field of laser and plasma cutting, recommended the correct capacity PL –model filter units for each KOIKE laser cutter: 1pcs. PL-5000 and 1pcs. PL-6000 for 2 different KOIKE laser cutting machines were installed. With this system solution, a perfect result was achieved for both of the laser cutters.
