CASE STUDY NAME

PLASMA CUTTING FUME EXTRACTION WITH PL-FILTER UNITS

Case Study Facts

Products:	PL – 4000 Filter Unit	Process:	CNC Plasma Cutting
Customer:	ŞAHİN PLAZMA - Turkey		

Requirements & Challenges

ŞAHİN PLAZMA is a producing company and they produce "**profile cutting lines**" with CNC controlled **plasma technology**. Since the material that are cut in the plasma profile cutting lines, are mostly thick material, a very **high amount of smoke and dust clouds** arise from the production line. ŞAHIN CNC was looking for a robust solution for its product.

SOLUTION

VANTERM offered a PL-4000 plasma filter unit, according to its investigation and calculations made based on the design parameters of the **profile cutting line**. The PL-4000 has perfectly met the dust and smoke emission load arising from the profile cutting line. **A perfect result** have been achieved.
